Subject:- Data Structure.

PRN :- 20220802043

Batch :- A1

## Theory Assignment 01

Q1) Sort the given array element using Bubble Sort:-  
-2, 45, 0, 11, -9.

⇒

[-2, 45, 0, 11, -9]

[-2, 45, 0, 11, -9]

[-2, 45, 0, 11, -9]

[-2, 0, 45, 11, -9]

[-2, 0, 11, 45, -9]

[-2, 0, 11, 45, -9]

[-2, 0, 11, -9, 45] → first iteration.

[-2, 0, 11, -9, 45]

[-2, 0, 11, -9, 45]

[-2, 0, -9, 11, 45]

[-2, 0, -9, 11, 45] → Second iteration.

[-2, 0, -9, 11, 45]

[-2, 0, -9, 11, 45]

[-2, -9, 0, 11, 45]

[-2, -9, 0, 11, 45]

[-2, -9, 0, 11, 45] → Third iteration.

[-2, -9, 0, 11, 45]

[-9, -2, 0, 11, 45] → fourth iteration.

Code:-

```
def bubbleSort (array):  
    n = len(array)
```

```
    for i in range (n-1):
```

```
        for j in range (0, n-i-1):
```

```
            if array array[i] > array[i+1]:
```

```
                temp = array[i]
```

```
                array[i] = array[i+1]
```

```
                array[i+1] = temp
```

```
array = [-2, 45, 0, 11, -9]
```

```
print ("The given array is : ", array)
```

```
bubbleSort (array)
```

```
print ("Sorted array is : ")
```

```
for i in range (len(array)):
```

```
    print ("%d" % array[i], end = " ")
```

Q2) Sort the given array element using Selection Sort : 20, 12, 10, 15, 2.

⇒ length of array.

length = len (array) → 5.

[20, 12, 10, 15, 2] → given array

[20, 12, 10, 15, 2]

[2, 12, 10, 15, 20]

[2, 10, 12, 15, 20] → sorted array

1. हर एक छात्राजित हजार बार असफल होने पर भी फिर से पुरुषार्थ करो, अवश्य सफलता मिलेगी।

Code :-

```
def SelectionSort(arr):
```

```
    n = len(arr)
```

```
    for i in range(n-1)
```

```
        Small Ndx = i
```

```
        for j in range(i+1, n):
```

```
            if arr[j] < arr[Small Ndx]:
```

```
                Small Ndx = j
```

```
    if Small Ndx != i
```

```
        temp = arr[i]
```

```
        arr[i] = arr[Small Ndx]
```

```
        arr[Small Ndx] = temp
```

```
arr = [20, 12, 10, 15, 2]
```

```
SelectionSort(arr)
```

```
print(*arr)
```

Q3.7 Sort the given array element using insertion sort  
9, 5, 1, 4, 3.

[9, 5, 1, 4, 3]

[5, 9, 1, 4, 3]

[5, 1, 9, 4, 3]

[5, 1, 4, 3, 9]

[1, 5, 4, 3, 9]

[1, 4, 3, 5, 9]

[1, 3, 4, 5, 9]

```
def Insertion Sort (arr):
```

```
    n = len(arr)
```

```
    for i in range (1, n):
```

```
        Value = arr[i].
```

```
        pos = i
```

```
        while pos > 0 & Value < arr[pos-1]
```

```
            arr[pos] = arr[pos-1]
```

```
            arr[pos] < arr[pos-1]
```

```
            pos = pos - 1
```

```
        arr[pos] = Value
```

```
arr = [9, 5, 1, 4, 3]
```

```
InsertionSort (arr)
```

```
Print (arr)
```

Q47 Sort the given array element using merge sort.  
6, 5, 12, 10, 9, 1

6	5	12	10	9	1
---	---	----	----	---	---

6	5	12
---	---	----

10	9	1
----	---	---

6	5
---	---

12
----

10	9
----	---

1
---

5	6	12
---	---	----

1	9	10
---	---	----

1	5	6	9	10	12
---	---	---	---	----	----

```
def MergeSort(arr):
```

```
    if len(arr) > 1:
```

```
        mid = len(arr) // 2
```

```
        L = arr[:mid]
```

```
        R = arr[mid:]
```

```
        mergeSort(L)
```

```
        mergeSort(R)
```

```
        i = j = k = 0
```

```
        while i < len(L) & j < len(R):
```

```
            if L[i] <= R[j]:
```

```
                arr[k] = L[i]
```

```
                i += 1
```

```
            else:
```

```
                arr[k] = R[j]
```

```
                j += 1
```

```
                k += 1
```

```
        while i < len(L):
```

```
            arr[k] = L[i]
```

```
            i += 1
```

```
            k += 1
```

```
        while j < len(R):
```

```
            arr[k] = R[j]
```

```
            j += 1
```

```
            k += 1
```

```
arr = [6, 5, 12, 10, 9, 1]
```

```
mergeSort(arr)
```

```
print(*arr).
```

Q5) Sort the given array element using merge sort:

*Ans*

```

def mergeSort(arr):
    if len(arr) > 1:
        mid = len(arr) // 2
        L = arr[:mid]
        R = arr[mid:]
        mergeSort(L)
        mergeSort(R)
        i = j = k = 0
        while i < len(L) & j < len(R):
            if L[i] <= R[j]:

```

$arr[k] = L[i]$

$i++$

else:

$arr[k] = R[j]$

$j++$

$k++$

while  $i < \text{len}(L)$ :

$arr[k] = L[i]$

$i++$

$k++$

while  $j < \text{len}(R)$ :

$arr[k] = R[j]$

$j++$

$k++$

~~$arr = [8]$~~

$arr = [8, 7, 8, 1, 0, 9, 2]$

merge sort (arr)

print(\*arr).
